

Sprint Report 3 - CMPS 115 – Software Methodology

Heading: Vittles

Actions to stop doing: Repetitive confusion integrating in-between modules. Our current issue at the moment is integrating them together. We have made progress in a slow paste since last week and hope to have a working demo by the end of this week.

Actions to start doing: This requires more communication within our team dynamic, in terms of knowing every module, in order to deliver the product next week. Probably need to read more documentation between each module in order to authenticate any merging.

Actions to keep doing: Our communication is well established with one another since the last report. We have no tensions with one another and hope this relationship is consistent for the last week in the quarter.

Work completed: We have finished the front-end and back-end Android Studio, Firebase, Login XML, and Yelp Api.

Not Completed: Integrating in-between each module's.
