Working Prototype Known Problems Report

List of functions not working correctly:

- Splash screen off center when starting up/opening the application; Possible actions for removal may be adding gravity to center the mp4 on the activity_splash.xml code
- Group sessions
- User login data storage unable to be recorded after username and password entered
- Swipe functionality
- Tensorflow implementation
- Firebase components unable to pass authorization and authentication, taken out of code; Possible solutions would be more time to work through the obstacles
