Sprint #1 Report, Vittles, 4/28/17

Actions to stop doing: As a team we need to stop procrastinating. We have had a lot of work with assignments and midterms in other classes that we haven't been keeping up as much with this class. We must change this in order for us to be on track with vittles and get the necessary features accomplished.

Actions to start doing: We need to start holding daily scrum meetings that work for everybody. We haven't had many daily scrum meetings, but the ones we do sometimes don't consist of all five members which is pivotal to reach a consensus that represents the ideas of the group as a whole.

Actions to keep doing: We need to keep allotting time in our days to research into our respective technologies. Everybody has been doing their part, keeping up with researching their technology and it will allow us to have an efficient start to the hard coding portion.

Work completed/not completed: We completed our goal as developers to understand more about firebase and its applications. Through all of our research we have amassed enough knowledge to understand how it stores data in certain locations.

We have not completed a means to represent a group of friends nor a voting system. We have done research into how it is possible but have not yet been able to create a working prototype.

We completed one of our user stories that requested for a Tindr like swiping functionality to be utilized for voting. However, we have not implemented it yet since we have not completed the coding for the group and voting system.

Work completion rate: We completed about 2 user stories over about 15 hours of commitment during the prior sprint. The sprint lasted for about a week and a half.

As developer understand more about Firebase: ½ hour ideal work hours/day

As user have Tindr swipe functionality to vote: 1 ideal work hours/day

As user be able to vote in group of friends: 1 ideal work hours/day
